PROFESSIONAL SUMMARY

Detail-oriented **Software Developer** with hands-on experience in **React, JavaScript, SQL, HTML5, CSS3**. Skilled in building scalable web applications and interactive dashboards. strong problem-solving skills and a passion for providing efficient and user-focused solutions.

TECHNICAL SKILLS

- **Languages:** React, JavaScript (ES6+), HTML5, CSS3
 - **Frameworks & Libraries:** React.js, Tailwindcss, Bootstrap, Node.js, Express.js
 - **Databases:** MySQL, MangoDB
 - **Tools & Platforms:** Git, GitHub, VS Code, Antigravity
-

INTERNSHIP EXPERIENCE

Front-End Developer Intern
COGNIFYZ

Dec 2025 – Jan 2026

- Developed responsive web pages using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and clean UI design.
 - Built interactive components and improved user experience through proper layout, styling, and basic DOM manipulation.
 - Optimized page structure and styling for better performance and usability.
 - Followed modern frontend workflows and version control fundamentals during project execution.
-

PROJECT

Front-end Project E-Commerce Webpage

React, HTML, CSS, JAVASCRIPT,

- Designed and deployed a **web-based E-Commerce**, This project is a fully responsive e-commerce website designed to provide users with a smooth and intuitive online shopping experience.
- The application includes key features such as product listing, detailed product pages, search and filtering options, a functional shopping cart, and a user-friendly checkout interface. Built using modern frontend technologies, the project focuses on clean UI/UX, component reusability, and efficient state management. It also integrates client-side routing for seamless navigation and stores user interactions like cart and wishlist data for a personalized experience.

Full-Stack Project Find Your Donor

React, HTML, CSS, JAVASCRIPT, Tailwindcss,

- Find Your Donor is a web-based application designed to connect blood donors and recipients quickly during emergency situations. In many critical cases, patients struggle to find the right blood group on time. This project solves that problem by providing a simple platform where donors can register and recipients can search and contact suitable donors instantly.
- In this system, donors register their details such as name, blood group, location, phone number, and availability. These details are stored securely in the database. When a recipient needs blood urgently, they visit the website and search for donors based on blood group and nearby location. The application filters the data and shows matching donors so the recipient can easily contact them.

- The main goal of this project is to reduce the time required to find blood in emergencies. Instead of calling many hospitals or blood banks, the recipient can directly reach volunteers who are willing to donate. This makes the process faster, easier, and more reliable.
-

EDUCATION

B.Sc., Biotechnology

Apollo Arts and Science College, Poonamallee, Chennai.

Apr 2025
